Ginimax Purple Teeth Whitening Strips

14 Treatments （28 strips - Each sealed packet contains 1 upper strip and 1 lower strip）

User Guide V1.0

IMPORTANT USAGE INFORMATION

- For External Use Only: Intended for use on teeth only. **Do not swallow the strips.** If ingested, seek medical help immediately.

- Avoid Contact with Eyes: If the product gets into your eyes, rinse thoroughly with water.

- Keep out of reach of children and not recommended for children under 18.

- Do Not Use: On loose teeth, braces, caps, crowns, fillings, or dentures (whitening strips only whiten natural teeth). Do not use if you have gum disease, dental ulcers, or have recently undergone orthodontic/dental surgery.

- Pregnancy & Allergies: Consult a healthcare professional before use if you are pregnant, breastfeeding, or allergic to any ingredients.

- Sensitivity: If you experience severe gum irritation, persistent pain, or severe sensitivity, stop using immediately and consult your dentist.

- During Wear: Do not eat, drink (except water), smoke, or sleep while wearing the Ginimax Purple Whitening strips.

- Recommended Time: For the best balance of whitening and comfort, we recommend a 3**0-minute application**. Leaving the strips on longer may lead to increased sensitivity and a harder, stickier removal process.

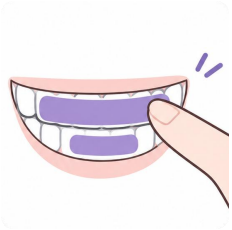

- Frequency: Use a maximum of once daily (1 pair).

- Storage: Store in a cool, dry place away from direct sunlight and heat.

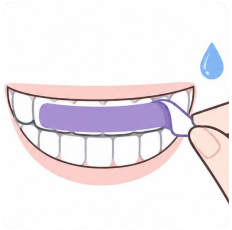

STEP 1：THOROUGHLY DRY

Use a tissue to wipe away all saliva. A dry surface is the secret to a strong grip.

STEP 2： APPLY & PRESS

Longer strip on upper teeth, shorter on lower teeth. Press firmly.

STEP 3: WET & PEEL

Wait 30 minutes. If stuck, wet the edge with water before peeling slowly. Brush off any violet residue.

1. Before You Apply （Crucial for Adhesion）

- Brush and floss your teeth, wait at least 30 minutes to let your mouth return to its natural state.

- THOROUGHLY DRY your teeth. Use a clean tissue to wipe away saliva from the tooth surface.

Note 1: Avoid applying immediately after brushing. Brushing temporarily leaves enamel and gums more vulnerable. Waiting at least 30 minutes allows your mouth to recover, helping to minimize the risk of tooth sensitivity and gum irritation.

Note 2: Our dry-strip PVP technology activates with moisture. The drier your teeth, the stronger the grip.

- Keep your hands dry.

2. Application Steps (Once Daily, 30 minutes)

- PEEL: Tear open the packet and peel off the protective film.

- APPLY: Place the longer strip on your upper teeth and the shorter strip on your lower teeth (align the straight edge with your gumline). Press gently for 2-3 seconds onto front side of teeth, then fold over teeth. Press gently with finger pads for 2-3 seconds onto back side of teeth.

- Wait: Leave on for 30 minutes. You can talk or work. Do not eat, smoke, or sleep. (Note: Please strictly follow the 30-minute limit. 30 minutes is optimized for whitening efficacy and easy removal).

3. Remove & Cleanup (How to avoid a "glue-like" grip)

- DO NOT force pull if the strip feels tight.

- WET THE EDGE: Dampen your finger with water and gently rub it along the edge of the strip for 10-15 seconds to soften the adhesive.

- PEEL SLOWLY: Peel the strip off gently in one piece from the back of the teeth.

- BRUSH OFF RESIDUE: A temporary violet residue may remain. Gently brush with a dry toothbrush (or one with minimal water) to break down this film. Then, rinse your mouth or brush again with a small amount of toothpaste, and the violet color will be completely removed. This residue is normal—it consists of the color-correcting pigments and film-forming ingredients, not a stain. It will leave no trace after brushing.

4. How do Ginimax Purple Whitening Strips Work?

- Progressive Whitening (14 treatments): The 6% hydrogen peroxide oxidizes deep stains over time. Most users start seeing noticeable changes around day 3-5. Complete the full 14-day course (28 strips) for optimal and stable results.

- On-Contact Optical Boost (Temporary): The violet pigments neutralize yellow tones immediately upon contact. You may notice a brighter look for 1-2 hours after removal. This is a temporary cosmetic optical effect and will fade after eating or drinking.

5. For Sensitive Teeth (Safety Boundary)

This product contains 6% Hydrogen Peroxide. There is a chance that you may experience tooth sensitivity and/or gum discomfort.

The effects are generally mild. The tooth sensitivity is temporary and not harmful.

- Patch Test: If you have a history of sensitivity, cut a small piece of the strip and apply it to one tooth for 24 hours before full application.

- Gradual Start: For the first week, use every other day to let your teeth adjust to the peroxide.

- Stop if needed: If you experience severe pain or gum irritation, discontinue use and consult your dentist.

6. Ingredients

Hydroxypropyl Methycellulose, PVP, Glycerin, Water/Aqua, Alcohol, Hydrogen Peroxide, Menthol, CI 17200, CI 42090
